AUTOMATED TESTS PASSING

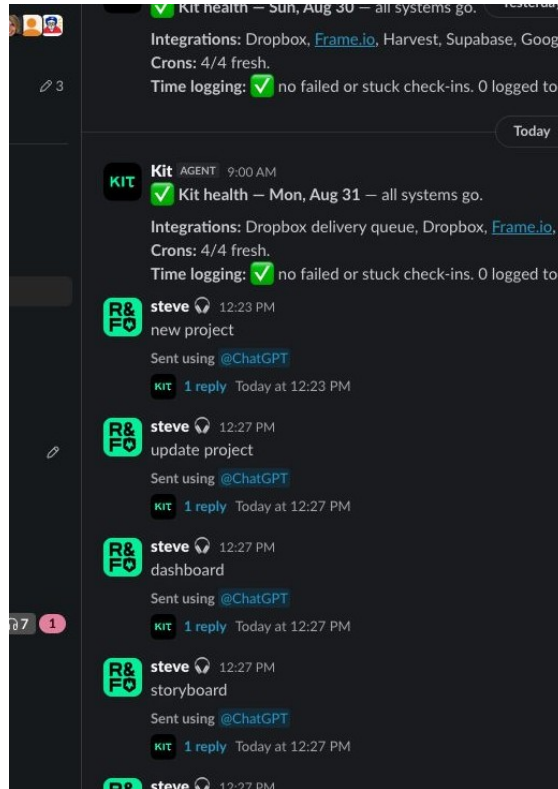

# Certification snapshot

This handbook records a complete production review: automated verification, live Slack commands, real provider workflows, security checks, and operator-facing evidence.

| STATUS    | FUNCTION               | VERIFIED RESULT                                                                                 |
|-----------|------------------------|-------------------------------------------------------------------------------------------------|
| • WORKING | Application test suite | 794 application/agent/script tests and 460 Bolt tests passed.                                   |
| • WORKING | Build and types        | Root, Bolt and tools typechecks passed; production Webpack build passed.                        |
| • WORKING | Dependencies           | Root and Bolt npm audits reported zero vulnerabilities.                                         |
| • WORKING | Database security      | Migration guard passed; Supabase security advisor reported zero findings.                       |
| • WORKING | Live production        | Provision, update, outgoing share, workback progression and archive draft flows were exercised. |
| • LIMITED | Legacy lint debt       | No new lint debt; the ratchet preserves 1,264 existing errors / 87 warnings for later cleanup.  |

# Start in Slack

Kit is Slack-native. Use a direct message for private workflows, or run /kit in an appropriate project channel when project context should be inferred.

- new project — opens the full project provisioner
- dashboard — opens the founder-only Control Center

- update project — selects and pre-fills an existing live project

- storyboard — parses a script and creates Boords + ElevenLabs Studio work

- archive project — opens the private portfolio/archive workflow

- onboard freelancer — begins guarded onboarding

# Provision and update projects

The project card is the single launch point. Kit creates provider records, stores stable IDs, reports partial steps honestly, and retries safe failures without replaying completed work.

| STATUS    | FUNCTION                | VERIFIED RESULT                                                                                            |
|-----------|-------------------------|------------------------------------------------------------------------------------------------------------|
| ● WORKING | New project             | Prefilled Slack card launches cross-system creation.                                                       |
| ● WORKING | Existing project update | Live Slack channels reconcile with editable database projects; stale deleted tests stay out of the picker. |
| ● WORKING | Cross-system ripple     | Project 2697 completed across Slack, Dropbox, Frame.io, Harvest, Sheet, Supabase and Control Center.       |
| ● WORKING | Durable recovery        | Retryable failures persist per-step state; unrecoverable failures surface as needs attention.              |

|    |                                                  |                    |                  |        |

## One source of truth

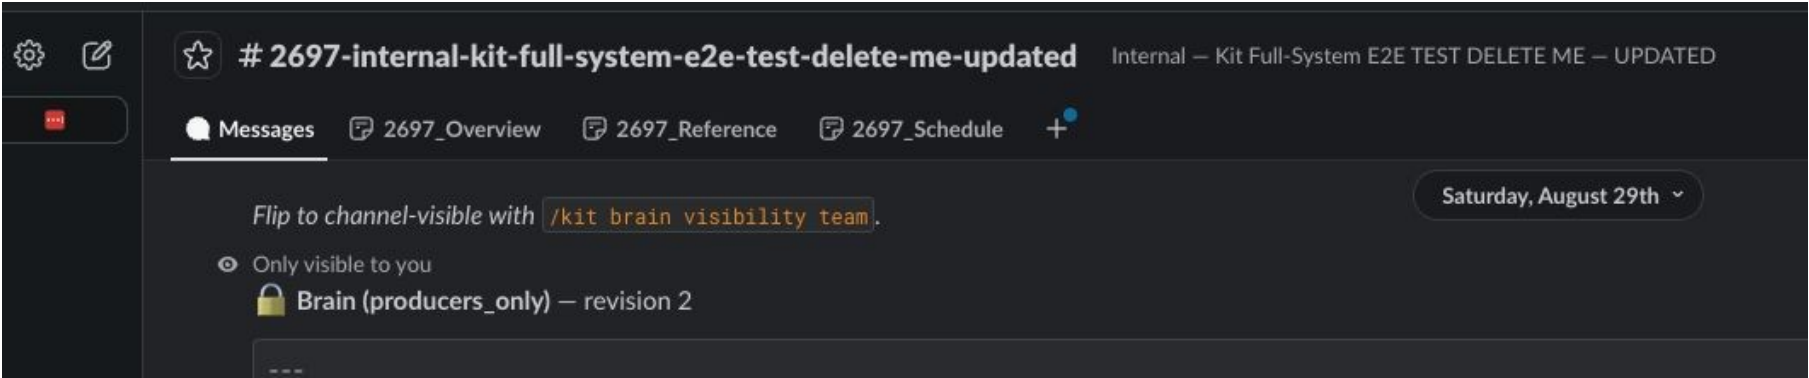

Producers edit the Project Control Google Sheet. Slack canvases are generated, view-only projections. Provider-created links and live workflow state flow back into the same model.

[illegible]

- Projects: identity, client, phase, status and next milestone
- Links: Dropbox, Frame.io, Figma, Boords and production references
- Project Specs + Deliverables: manual production requirements
- Workback: dates, milestone order, duration and completion state
- Status Log: only rows explicitly marked Team may appear in shared canvases; blank/Private fail closed

# Four project canvases

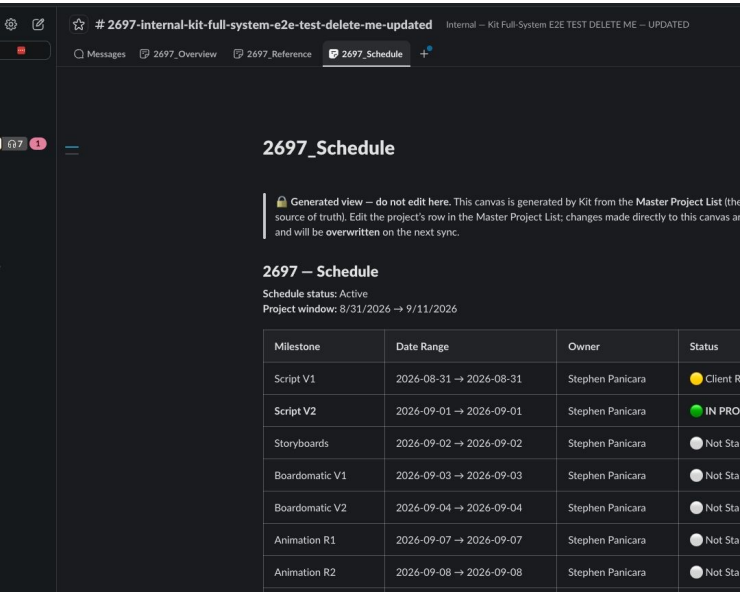

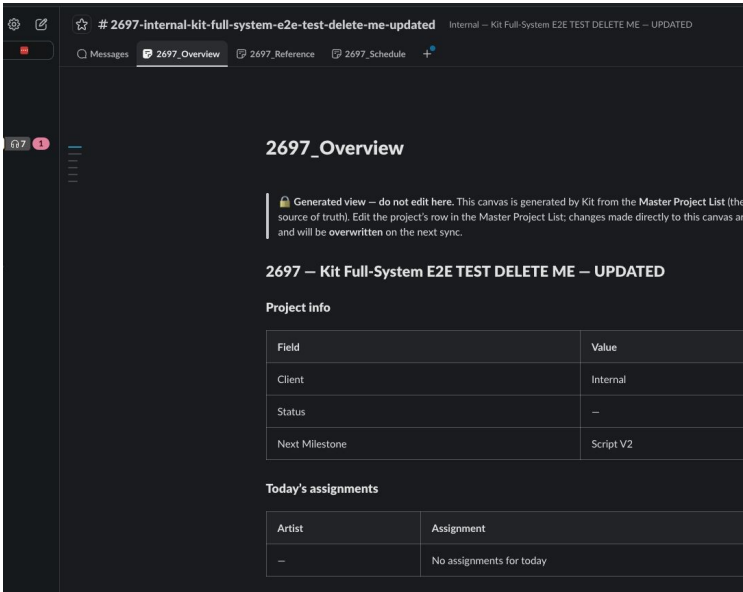

New projects generate four named canvases: <ID>\_Overview, <ID>\_Schedule, <ID>\_Reference and <ID>\_NotesAndFeedback. Existing projects are reconciled without making canvases editable.

| STATUS    | FUNCTION                     | VERIFIED RESULT                                                                                                                                                                          |
|-----------|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| • WORKING | Overview                     | Project info, empty-or-filled assignments table, latest share and next milestone.                                                                                                        |
| • WORKING | Schedule                     | Workback milestones, dates, durations and live status.                                                                                                                                   |
| • WORKING | Reference                    | Links, specs, delivery requirements and project references.                                                                                                                              |
| • WORKING | Notes & Feedback             | Canvas created and synchronized; only Team status-log rows render.                                                                                                                       |
| • LIMITED | Historical channel tab strip | Slack accepted the backfilled Notes canvas with channel access but did not expose a public API to force its visible tab attachment. New-project provisioning remains the supported path. |

# Overview and schedule stay live

Sheet changes trigger regeneration. Empty sections render as intentional tables, not missing content. Workback milestones reflect the approved production plan and current state.

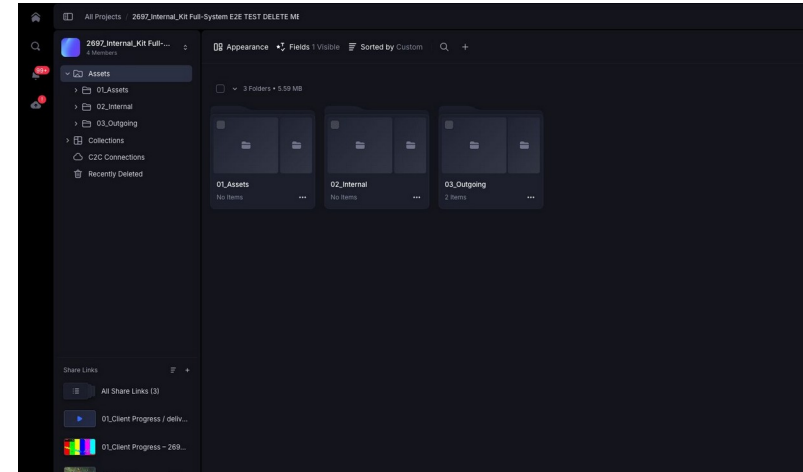

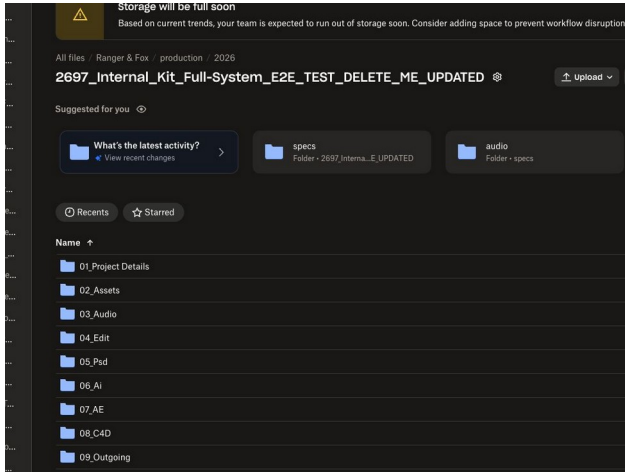

- Start/end dates plus milestone count seed the proposed workback.
- A new outgoing share can advance the current milestone after confirmation.

- Producer review confirms the schedule before it becomes authoritative.

- Completed milestones render complete; the next milestone becomes in progress.

# Dropbox to Frame.io

Files added under the project year and outgoing Client Progress or Delivery folders are matched to the project, uploaded to Frame.io and given a public review share. The Sheet and Slack views receive the latest-share link.

- Project 2697 proved upload → Frame.io → public share → latest-share persistence.
- The first two project digits select the Dropbox year folder (26xx → 2026).
- Failed Slack notifications remain retryable until delivery is confirmed.

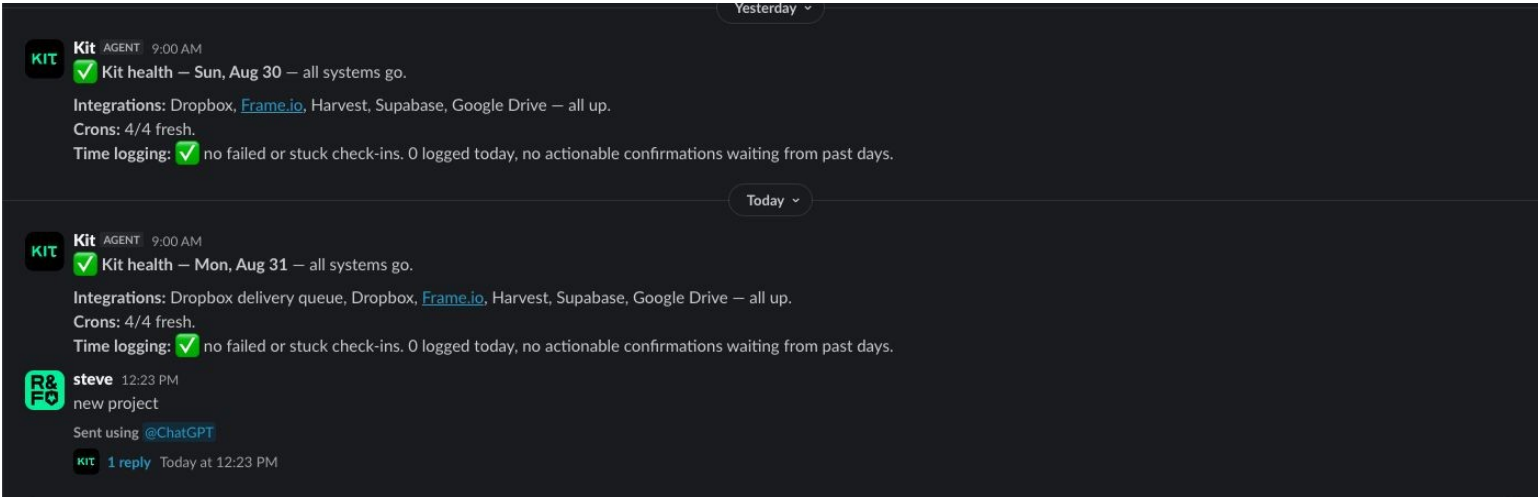

# Storyboard plus voice-over

Upload a supported script from the storyboard card. Kit extracts DOCX text, creates a resumable Boords job, and creates an ElevenLabs Studio project populated with voice-over copy.

| STATUS                                                                                                                                     | FUNCTION          | VERIFIED RESULT                                                                                                            |

| <ul style="list-style-type: none"><li>WORKING</li></ul>                                                                                    | DOCX parsing      | mammoth is present in the Railway runtime; extraction regression is covered.                                               |
| <ul style="list-style-type: none"><li>WORKING</li></ul>                                                                                    | Boords            | Recent production storyboard jobs completed; long jobs retain resumable IDs.                                               |
| <ul style="list-style-type: none"><li>WORKING</li></ul>                                                                                    | ElevenLabs Studio | Recent jobs completed with Studio project URLs and populated VO text.                                                      |
| <ul style="list-style-type: none"><li>WORKING</li></ul>                                                                                    | Timeout recovery  | Use /storyboard resume <job-id>; progress is not discarded.                                                                |
| <ul style="list-style-type: none"><li>Choose the script and parsing mode.</li><li>Kit returns provider links when work is ready.</li></ul> |                   | <ul style="list-style-type: none"><li>Confirm the project and storyboard settings.</li></ul>                               |
|                                                                                                                                            |                   | <ul style="list-style-type: none"><li>Review creative output in Boords and audio structure in ElevenLabs Studio.</li></ul> |

# Hours and recurring operations

Timezone-aware reminders arrive as Kit direct messages. Replies become confirmation cards and approved lines write to Harvest exactly once.

| STATUS    | FUNCTION          | VERIFIED RESULT                                                                      |
|-----------|-------------------|--------------------------------------------------------------------------------------|
| • WORKING | Daily DM delivery | Durable per-person/per-workday ledger with catch-up window and duplicate protection. |
| • WORKING | Confirmation      | Typed replies and card actions authorize the acting Slack user.                      |
| • WORKING | Harvest writes    | Current actionable records are reconciled; one no-ID record is intentionally manual. |
| • WORKING | Health digest     | Integrations, cron freshness, time anomalies and queues are summarized daily.        |

# Briefings, Plaud and private knowledge

Kit researches external attendees, prepares concise private briefings, and ingests Plaud recordings. Raw transcripts never become shared team context.

| STATUS                                                                                                                                                                                                                                                                                                                                                  | FUNCTION               | VERIFIED RESULT                                                                                 |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------|-------------------------------------------------------------------------------------------------|
| • WORKING                                                                                                                                                                                                                                                                                                                                               | Meeting briefings      | Meeting info, external attendee background and natural-language positioning.                    |

| • WORKING                                                                                                                                                                                                                                                                                                                                               | Raw transcript privacy | Founder/admin only, including all historical raw transcript chunks.                             |
| • WORKING                                                                                                                                                                                                                                                                                                                                               | Safe derivatives       | Financial, contact, legal, credential, personal, URL and named-speaker lines removed.           |
| • WORKING                                                                                                                                                                                                                                                                                                                                               | Shared-channel guard   | Artists receive no raw transcript context; non-DM responses pass a deterministic content guard. |
| <ul style="list-style-type: none"><li>• Treat a failed attendee match as “unverified,” never as permission to invent a biography.</li><li>• Use Status Log Visibility=Team only for information safe to project into Slack canvases.</li><li>• Keep budget, client contacts, private feedback and sensitive operational detail producer-only.</li></ul> |                        |                                                                                                 |

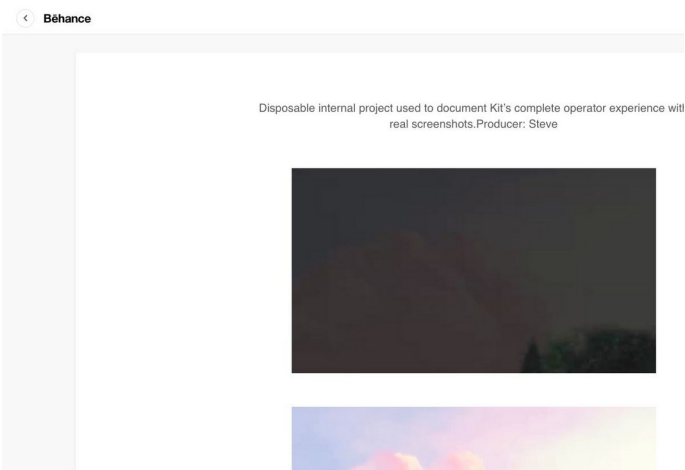

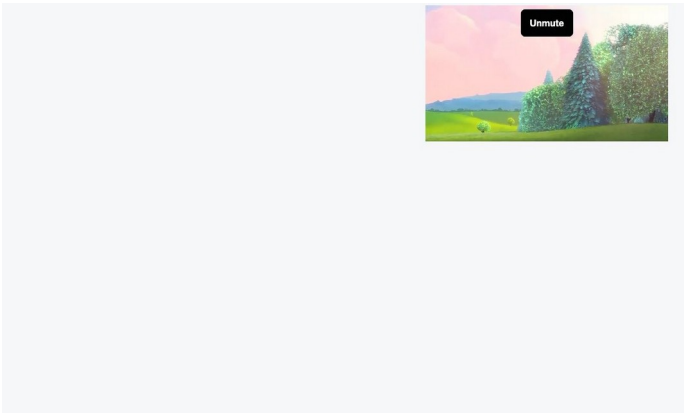

# Freelancers, accessibility and delivery

Guarded onboarding, delivery checks and specialist workers extend Kit beyond project setup while preserving human review at consequential steps.

| STATUS    | FUNCTION                 | VERIFIED RESULT                                                                                     |
|-----------|--------------------------|-----------------------------------------------------------------------------------------------------|
| • WORKING | Freelancer onboarding    | Private card path confirmed; safe partial test avoided inviting a real person.                      |
| • WORKING | Accessibility jobs       | Provider-backed accessibility work and exact stored cost totals appear in Control Center.           |
| • WORKING | Delivery Queue           | Profile-based render jobs are durable and assigned to registered workers.                           |
| • WORKING | Render worker            | Current heartbeat, After Effects capability and a prior Dropbox → Frame.io output were verified.    |
| • LIMITED | New render job this pass | Not re-run because prior live output and current worker health already provide production evidence. |

# Archive once, prepare every channel

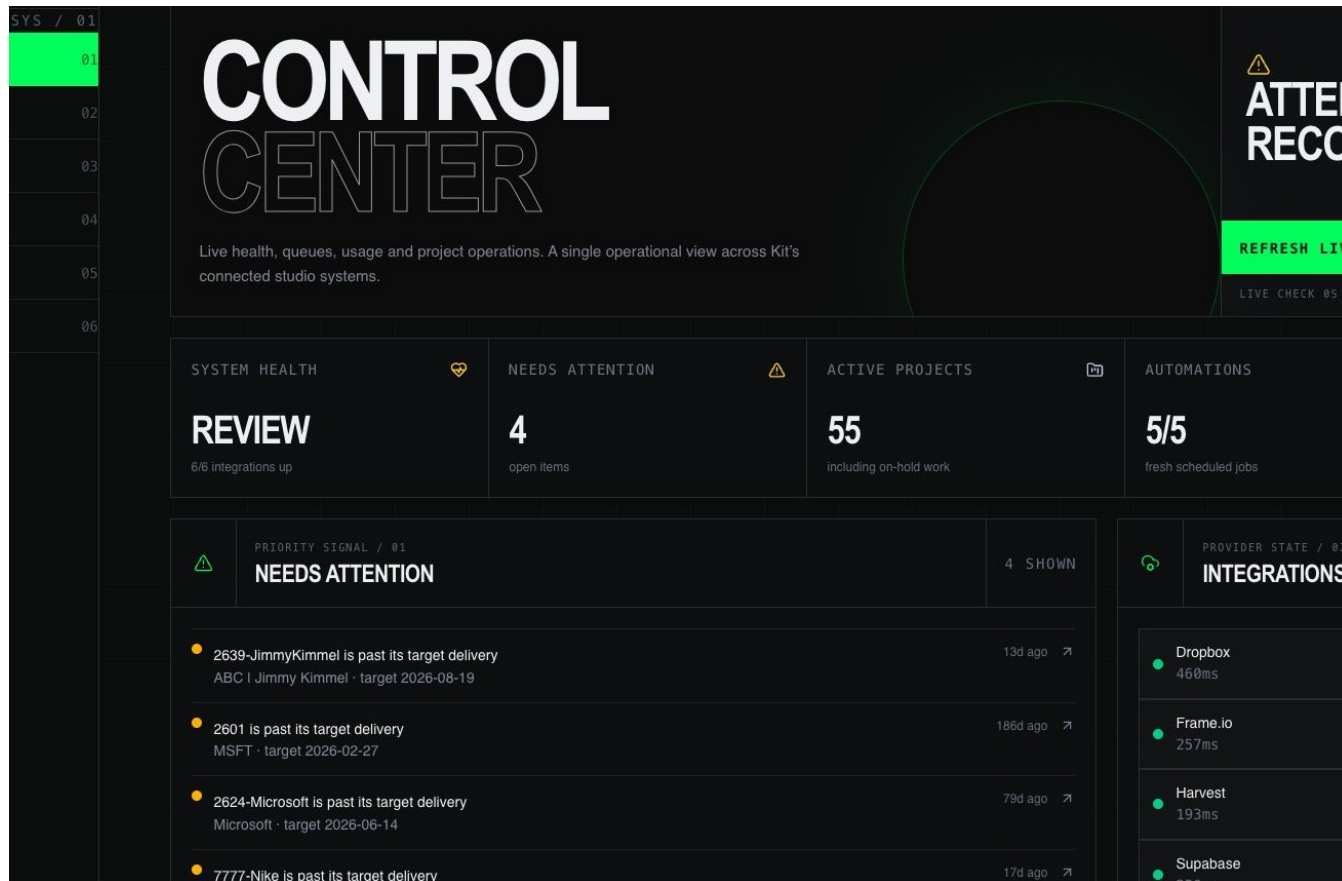

The producer-only archive card drafts safe copy and credits, then prepares reversible provider outputs. Public publishing remains a human decision.

| STATUS                                                                                                          | FUNCTION                                                                                                 | VERIFIED RESULT                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <div><div>• WORKING</div><div>• WORKING</div><div>• WORKING</div><div>• WORKING</div><div>• LIMITED</div></div> | <div>Live archive proof</div> <div>Vimeo</div> <div>Buffer</div> <div>Behance</div> <div>WordPress</div> | <div>Project 2699 completed Dropbox archive, still/GIF generation and durable provider steps.</div> <div>Unlisted video created.</div> <div>LinkedIn and Instagram drafts created.</div> <div>Private draft created with approved media and structured website copy.</div> <div>Draft adapter exists, but final provider-side proof remains operator-assisted through the designer entrance.</div> |

# Control Center

Open /control-center or DM “dashboard.” The portal centralizes health, usage, queues, project risk, worker state and guarded recovery actions.

- Founder-only authentication and project drill-downs
- Provider health, cron freshness and durable queue state
- Sheet → Canvas reconcile and private Behance retry with confirmation + audit trail
- Measured accessibility cost; uninstrumented model/infrastructure cost is labeled honestly

# Security and failure boundaries

Kit favors private delivery, explicit confirmation, stable IDs and durable ledgers. A provider failure must be visible and recoverable—not silently reported as success.

| STATUS    | FUNCTION            | VERIFIED RESULT                                                                     |
|-----------|---------------------|-------------------------------------------------------------------------------------|
| • WORKING | Supabase            | RLS on private ledgers; anon/authenticated access revoked where service-only.       |
| • WORKING | Secrets and history | Tracked sensitive screenshots removed; Git history and tags sanitized.              |
| • WORKING | Auth boundaries     | Founder controls fail closed; Slack actions verify actor and workspace ownership.   |
| • WORKING | Publishing safety   | Vimeo unlisted; Buffer/WordPress/Behance draft-only; Behance worker cannot publish. |
| • WORKING | Dependency posture  | Two npm audits returned zero vulnerabilities.                                       |
| • WORKING | Database posture    | Supabase security advisor returned zero findings.                                   |

# Current product map

Green means verified working in this pass. Yellow means implemented with a known provider or operator boundary. No red blockers remain in the core cloud product.

| STATUS    | FUNCTION                        | VERIFIED RESULT                                                                                    |
|-----------|---------------------------------|----------------------------------------------------------------------------------------------------|
| • WORKING | Project provision + update      | Cross-system create/update, picker reconciliation, recovery and stable naming.                     |
| • WORKING | Sheet + canvases                | Authoritative workbook and four generated view types.                                              |
| • WORKING | Dropbox + Frame.io              | Outgoing mirror, public share, latest-share and milestone state.                                   |
| • WORKING | Storyboards + VO                | DOCX parsing, Boords resume and ElevenLabs Studio.                                                 |
| • WORKING | Hours + health                  | DM reminders, confirmations, Harvest and daily health.                                             |
| • WORKING | Briefings + knowledge           | Attendee research, Plaud, privacy tiers and safe retrieval.                                        |
| • WORKING | Workers + accessibility         | Delivery jobs, live worker state and cost reporting.                                               |
| • WORKING | Archive + drafts                | Dropbox, media, Vimeo, Buffer and Behance proof.                                                   |
| • LIMITED | Historical Notes tab attachment | Slack API backfill edge; content exists and syncs, visible-tab attachment is not API-controllable. |
| • LIMITED | WordPress final proof           | Requires a safe operator-assisted pass through the designer-provided entrance.                     |

# Operator quick reference

Use these entry points for day-to-day operation and support.

| RESOURCE                                                                                                                                                                                             | LINK                                                                                                                                                                                            |
